Energy aware memory allocation in real-time systems
CCM-SRAM allocation to reduce consumption

Loïc Thomas

Presentation Overview
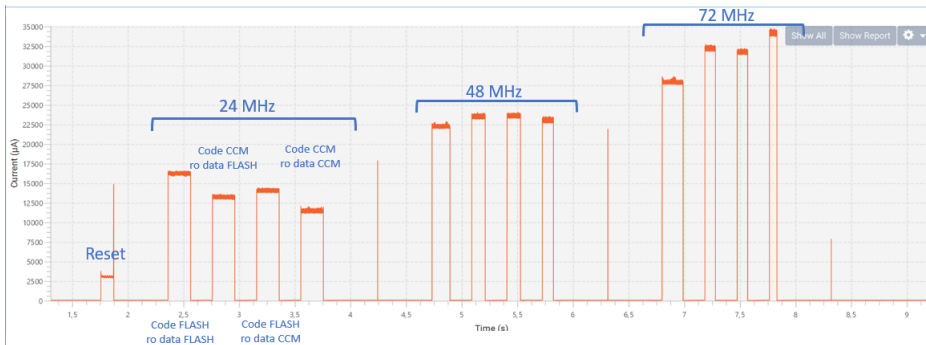

Current consumption graphic

Figure: Intensity consumption graph for differents pointer chase executions

# Energy decrease when instruction are moved in CCM

Moving instruction in CCM SRAM can overall improve energy consumption

# Runtime decrease when instruction are moved in CCM

In high frequencies the runtime is reduced when code is moved in CCM SRAM.

# Energy decrease when instruction are moved in CCM

In high frequencies, intensity when the code is running from flash is lowered.

What we could observe if we had a
sampling frequency of 48 MHz

What we really see

Definitions & Examples

Definition

A prime number is a number that has exactly two divisors.

Example

- 2 is prime (two divisors: 1 and 2).
- 3 is prime (two divisors: 1 and 3).
- 4 is not prime (three divisors: 1, 2, and 4).

You can also use the `theorem`, `lemma`, `proof` and `corollary` environments.

Theorem, Corollary & Proof

Theorem (Mass–energy equivalence)

$E = mc^2$

Corollary

$x + y = y + x$

Proof.

$\omega + \phi = \epsilon$ □

$$\cos^3 \theta = \frac{1}{4} \cos \theta + \frac{3}{4} \cos 3\theta \tag{1}$$

Verbatim

Example (Theorem Slide Code)

```
\begin{frame}
\frametitle{Theorem}
\begin{theorem}[Mass--energy equivalence]
$E = mc^2$
\end{theorem}
\end{frame}
```

Slide without title.
